Introduction To Earthquake Engineering

Synopsis

This book is intended primarily as a textbook for students studying structural engineering. It covers three main areas in the analysis and design of structural systems subjected to seismic loading: basic seismology, basic structural dynamics, and code-based calculations used to determine seismic loads from an equivalent static method and a dynamics-based method. It provides students with the skills to determine seismic effects on structural systems, and is unique in that it combines the fundamentals of structural dynamics with the latest code specifications. Each chapter contains electronic resources: image galleries, PowerPoint presentations, a solutions manual, etc.

Book Information

Hardcover: 265 pages

Publisher: CRC Press; 1 edition (May 25, 2017)

Language: English

ISBN-10: 1498758266

ISBN-13: 978-1498758260

Product Dimensions: 0.5 x 8 x 11 inches

Shipping Weight: 1.5 pounds (View shipping rates and policies)

Best Sellers Rank: #351,289 in Books (See Top 100 in Books) #16 in [Books > Engineering & Transportation > Engineering > Civil & Environmental > Seismic Design](#) #190 in [Books > Engineering & Transportation > Engineering > Civil & Environmental > Structural](#) #2251 in [Books > Textbooks > Engineering](#)

Customer Reviews

"A very practical and useful book for introducing earthquake engineering to college level students." — Jay Lin, AECOM, Oakland, California, USA "An invaluable resource of encyclopedic information and academic/technical knowledge that takes the reader step-by-step to the concept of earthquake engineering, its impact and our mitigation measures through mathematics." — Daniel Tsavdaridis, University of Leeds, United Kingdom "The book contents fit nicely with senior-level students that would introduce and engage them to learn more about earthquake engineering. The authors did a great job in introducing the concepts involved in earthquake engineering without sacrificing the needed rigor to tackle structural dynamics topics. The illustrations in this textbook are very effective." — Amjad J. Aref, University of Buffalo, New York, USA "This book fully covers the course content of my course, it is simple and

does not confuse the students with a lot of extra information. I really like the idea of the solutions to example problems prepared using computer programming methods." *Constantinos Repapis, Piraeus University of Applied Sciences, Aigaleo, Greece* "The book has been written in plain English explaining in details phenomena that could be challenging for beginners. It also expounded the different types of earthquakes and their origins, similarities and differences. The book is designed for engineering students but I believe that it includes some good information for students from different backgrounds." *Nebil Achour, Anglia Ruskin University, Cambridge, United Kingdom*

Dr. Hector Estrada, P.E. is currently Professor of Civil Engineering at University of the Pacific (Pacific); where he also served as Chair of the Civil Engineering Department. Prior to joining Pacific, Professor Estrada was chair of the Department of Civil and Architectural Engineering at Texas A&M University-Kingsville. Dr. Estrada has also had visiting research appointments at NASA, Texas Tech University, and the US Army Engineer Research and Development Center Construction Engineering Research Laboratory. His teaching interests include structural engineering and mechanics, the design of concrete, steel, and timber structures, structural dynamics, and earthquake engineering. He has published on structural engineering and engineering education in various peer-reviewed journals, conference proceedings, and presented research work at various technical conferences. He has published a book on drafting and design of structural steel buildings, and several book chapters. He has served as reviewer for a number of journals, conferences, book publishers, and funding agencies. Professor Estrada received his B.S. (with honors), M.S., and Ph.D. all in Civil Engineering from the University of Illinois at Urbana-Champaign. Dr. Luke Lee, Ph.D., P.E. is currently Associate Professor of Civil Engineering at University of the Pacific where he teaches courses in solid mechanics, structural dynamics and health monitoring, structural design, and engineering risk analysis. He has authored and co-authored numerous journal articles, conference papers, and book chapters in composite materials, structural health monitoring, service life estimation, and engineering pedagogy. Dr. Lee received his B.S. in Civil Engineering from University of California, Los Angeles, M.S. in Civil Engineering from University of California, Berkeley, and Ph.D. in Structural Engineering from University of California, San Diego.
