# Luftwaffe Secret Projects: Strategic Bombers 1935-1945

## Synopsis

This eagerly awaited companion volume to the enormously popular volume on fighters looks at the might-have-been strategic German bombers. Filled with transatlantic jets and projects that were on the drawing board or in prototype form at the war's end. Full color action illustrations in contemporary markings and performance data tables show vividly what might have been achieved had the war continued beyond 1945.

## Customer Reviews

Book condition was excellent. Subject matter was interesting. Information was lacking on some designs. But, remember most of these aircraft were only in the design stage. Colorful artwork. Makes you wonder what might have been produced, if WW2 continued past 1945.

Awesome book;luv it. This completes this series for me . I couldn't beat the price!!

This book is exemplary in its illustrations, line drawings, and photos of the various production models, prototypes, and proposals for new bombers. The imagination and forward thinking of the German aircraft designers is just stunning, and lucky for us Der Fuhrer did not persue a long range strategic bomber program. So, aircraft buffs, modelmakers, you will drool over this book.Guten Tag meine Herrs/Fraus

I mostly disagree with "anhistorian" and his review of the book. The artwork in it, and it's two

companion works, are top notch. I agree much of the text is simplified, but as a bonus that gives more room for line drawings, illustrations and photos. And I am not really interested in the authors political alignment, I am just reading his book. If you think he is being pro-German, well it appears to me that he IS German, and loves his country. Mr "anhistorian", if you are an American, don't you love your country? Nuff said. I would highly recommend this book to anyone interested in this unique subject. Great job!

Excellent documented information of German wonder weapons.

Very good book.

I came across the first of these books a long time ago..I had to wait for the two that followed a few years..this is the second in the series..I've personally always been drawn to the exotic and strange weapons Nazi Germany was meddling with from before the war and during..A lot of these designs have obviously influenced so many of the post war jets it's incredible.The German scientists left a wealth of documentation behind to show they had some pretty way-out ideas for aircraft..A lot were way beyond their time,some would never have flown,but some would have been a real menace in the skies over Europe(as shown by the operational appearance of the Me 262,Arado 234 and to a lesser extent the Me 163 and He 162).The whole swept back wing idea and flying wing concept was taken onboard by all nations after the war..I was lucky enough to get the whole set of these books. If you are a Luft 46 fan as I am and build thee exotic models these books give you plenty to ponder on..The artwork is great,although the writing is sparse it still gives a lot of detail. I would think these books will become quite hard to find soon so grab them while you can!

Yet another great volume in the "Secret Projects" series. This volume presents many little known to completely unknown tactical and strategic bombers designed and built in Germany during the war. Prior to the USA and Soviet Union, Germany was already planning for intercontinental bombers such as the Sanger Silbervogel bomber designed to enter the stratosphere, bomb America or Russia, refuel in Japanese held territory and continue on back to the launch site.This book is great for the descriptions, photographs, three-view drawings and illustrations. My purchase of the entire series is to help our organization, the International Resin Modellers Association ([...]) come up with new kits ideas. Any book from this series is a definite plus. Hopefully there will be more Secret Projects dealing with Italy, France, China, Argentina, Brazil and others.
