# Wetlands Explained: Wetland Science, Policy, And Politics In America

## Synopsis

This book brings together in compact form a broad scientific and sociopolitical view of US wetlands. This primer lays out the science and policy considerations to help in navigating this branch of science that is so central to conservation policy, ecosystem science and wetland regulation. It gives explanations of the attributes, functions and values of our wetlands and shows how and why public attitudes toward wetlands have changed, and the political, legal, and social conflicts that have developed from legislation intended to stem the rapid losses of wetlands. The book describes the role of wetland science in facilitating the evolution of a rational and defensible system for regulating wetlands and will shed light on many of the problems and possibilities facing those who quest to protect and conserve our wetlands.

## Customer Reviews

"[Lewis] has produced a fine book that does an excellent job of explaining what wetlands are and why they should be protected, in a manner that is accessible by non-experts in the field...I highly recommend it..."--Journal of Experimental Marine Biology and Ecology

William M. Lewis is at University of Colorado.

I bought this book to use in my yearly educational requirement as an Illinois Master Naturalist. I was barely aware of the background to the problem of maintaining wetlands in the USA, but this book

has given me ample material to begin my researches and to help me in understanding better what has and continues to wreak havoc with the kind of land we badly need to preserve. Highly recommended for anyone interested in the story of how current wetland policy came to be.

A great introductory book on the policy and politics of Wetlands in the US. I found the sections on the results and issues faced by states assuming federal wetland laws well covered and analyzed. Well written for a subject that could potentially be "dry".

very patient and helpful. I am very happy and excited about this product. It looks good, feels real, and cuts very well. I definitely think the product is of good quality for the low price. In other words, you get a good product for the price you are paying for. Definitely recommended! I will recommend it to my friend. it is very fast delivery. my best friend need it ,
